

We're located where our
raw material grows

 LUNDBERGS TRÄ
ARVIDSJAUR

The finest raw materials

We have the finest raw materials supplied to us from our own region. The woods we use - pine and spruce – have often been growing here for more than a century. Our raw material has a large proportion of live knots and core wood, which is perfect for customers who want the finest lumber products.

We work with Sveaskog, Holmen, the Swedish National Property Board, Arjeplog and Arvidsjaurs allmänning and others to ensure the continuity and quality of raw material supplies. About 80 local landowners also choose to sell their raw materials to us. We treat all of them with the importance they deserve.

A "village saw mill" near the Arctic Circle since 1939

Lundbergs Trä AB is a family-owned company that was established in 1939 by five brothers - Erik, Hilding, Mats, Sven and Sigurd Lundberg. Our company is located in Arvidsjaur, close to the Arctic Circle, and is now operated by the third generation of the Lundberg family. We offer a long sawing tradition, generations of passed-on expertise, a family feeling, and above all, a short and flexible decision-making process.

Our customers have exacting demands regarding dimensions, quality grades and service. Our goal for the future is to continue to satisfy those demands in the best way – with a personal approach, environmental awareness, and modern technology. Whether you're in Kalix or in Cairo, you'll feel close to Lundbergs Trä AB in Arvidsjaur.

The importance of quality-assured processing

Our whole production process is geared to handling our fine raw materials meticulously, at every stage. This care benefits all of us. From timber intake to packaging and transport, you can be assured that quality is on the minds of everyone involved. This, in combination with

efficient sawmill facilities, ensures that the final product meets each customer's unique requirements. The wood is heat treated in accordance with ispm 15. Our official registration number is SE-BD30.

We offer planing as further processing, and plane about 7,000 m³ of wood a year.

Package after package, geared to your specific requirements

Customers increasingly choose smaller volumes of wood, sorted according to purpose. That's no problem for us. On the contrary, our speciality is being able to meet the unique requirements of each customer.

All our production is customer order driven – a fact reflected throughout the process. Our customers, often carpentry shops and planing mills all over the world, know that their wood we ship to them will comply with their specifications. Customers use us not because of our size, but because they know we can quickly provide on-time deliveries of wood that matches their specific requirements.

Anyone can saw wood. What is difficult is sawing and supplying wood that complies with exact specifications. And that's what we do.
